

# **Quick Installation Guide**

Triple Power Lithium-ion Battery

### **Installation Prerequisites**

Make sure that the installation location meets the following conditions:

- The building is designed to withstand earthquakes
- The location is far away from the sea, to avoid sea water and humid air
- · The floor is flat and level
- · There are no flammable or explosive materials nearby
- THE AMBIENCE IS SHADY AND COOL, KEEP AWAY FROM HEAT AND AVOID DIRECT SUNLIGHT.
- The ambient enironment is shady and away from heat as well as direct sunlight.
- The temperature and humidity stay at a constant level.
- · There is minimal dust and dirt in the area.
- There is no corrosive gases present, including ammonia and acid vapor.
- The ambient temperature is within the range from 0°C to 55°C and the optimal ambient temperature is between 15°C and 35°C.

### NOTE!

The Triple Power battery is rated at IP55 and thus can be installed outdoors as well as indoors. However, if installed outdoors, do not expose the battery to directly sunlight and moisture.

### NOTE!

If the ambient temperature is beyond the operating range, the battery pack will stop operating to protect itself. The optimal temperature range for the battery pack to operate is form  $15^{\circ}$ C to  $35^{\circ}$ C. Frequent exposure to harsh temperatures may deteriorate the performance and lifetime of the battery module.

### **I**NOTE!

For the first installation, the interval among manufacture dates of battery modules shall not exceed 3 months.

### IV

## Overview of Installation

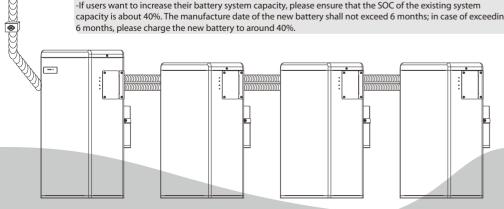

### NOTE!

-One T-BAT system is allowed to install one T-BAT H 5.8 with another three battery packs at most. Connecting more than four batteries in total to the T-BAT system will blow the fuse, and the batteries will be damaged.

-If the batteries have not been used for more than 9 months, these batteries must be charged to at least SOC 50 % each time

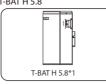

-If one of the batteries is replaced, the SOC of the battery after replacement shall be consistent with those of batteries that have not been replaced, with the maximum difference of between -5% and 5%.

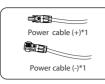

-If users want to increase their battery system capacity, please ensure that the SOC of the existing system capacity is about 40%. The manufacture date of the new battery shall not exceed 6 months; in case of exceeding

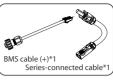

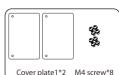

# Packing List (T-BAT H 5.8 and HV11550)

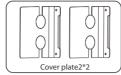

Note: The quick installation guide describes installation steps briefly. If you have any questions during the installation, please refer to the User Manual for more information

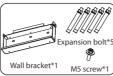

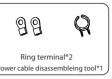

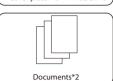

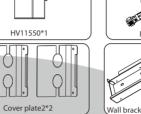

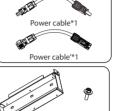

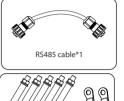

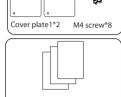

Expansion bolt\*5 Ring terminal\*2

### **Battery Installation**

Note: 1. For T-BAT H 5.8 +  $1\sim3$  battery moduls, please finish the battery installation before connecting cables!

2. Please make sure that the inverter is completely switched off before you start connecting cables!

Drill five holes with a Φ10 drill bit.

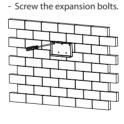

There are two installation ways, wall mounting and floor mounting.

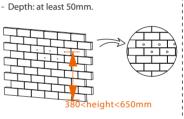

- Mark the position of the holes.

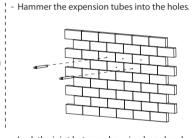

Wall bracket\*1

Match the battery with the bracket.

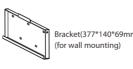

- Lock the joint between hanging board and wall bracket with M5 screw.

NOTE: 1. The distance between the bottom of the battery pack and floor shall not exceed 300mm.

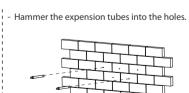

2. It is recommended to keep a distance of at least 300mm between battery packs.

### II. Floor mounting

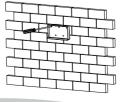

- Mark the position of the holes.

Drill five holes with a Φ10 drill bit. Depth: at least 50mm.

Screw the expansion bolts.

Match the battery with the bracket.

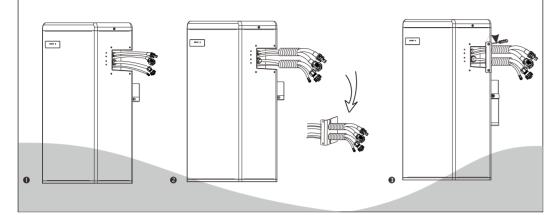

wall bracket with M5 screw **®** 

- Lock the joint between hanging board and

all bracket

'Note: To prevent the battery from becoming moist, it is recommended to place a foam cushion, or other cushion made up of other materials, with a height of 3 cm to 4 cm, under the battery.

# 1. Connect the cables. 2. Run the cables through the corrugated pipe. 3. DO REMEMBER TO INSERT THE SERIES-CONNECTED CABLE AT "-" AND "YPLUG" ON THE RIGHT SIDE OF LAST BATTERY MODULE TO COMPLETE THE INTERNAL CIRCUIT. 4. Set the cables into the groove of metal plates and screw them back to the battery module on both sides.

# For T-BAT H 5.8 + 1~3 battery packs: 1. Connect RS485 II of the first battery module (as show on the right) to RS485 I on the next battery module (as shown on the left). 2. Assemble cable gland and tighten cable cap.

**Communication Cable Connection** 

2. Insert the other end of the BMS communication cable to the BMS connector; then assemble cable gland and tighten cable cap.

1. Insert one end of the BMS communication cable without cable nut directly to the BMS port of Inverter.

VIII

For T-BAT H 5.8:
